Features

Regulated Converter

- Up to 1000 Watt fan-less power / 1200W boost
- Designed and manufactured in europe
- Efficiency exceeding 90% from 15% load
- Wide Operating temperature range -40…+80°C
- Certified to Industrial, and medical standards
- Analogue control & monitor function

AC/DC Converter

RACM1200-V

1200 Watt 9” x 3.8” Enclosed Single Output

3 YEAR warranty

Description

The RACM1200-V series is setting a new benchmark for compactness in the class of AC power supplies for reliable fan-less operation supporting long term system availability. A special baseplate cooled design supports heat transfer to allow up to 1000W continuous output power. Up to 1200 Watt output power is available for up to 10 seconds and in boost mode operation or for extended time with sufficient system airflow through the unit. A wide output voltage adjustment range and a combination of constant current limitation and hiccup mode settings makes the product multipurpose. The various analogue control and monitoring functions are accessible via connector. Optional firmware settings available on project base. The RACM1200-V Series can be limited to inherently fail-safe settings on request, using smart, controlled, fault-limiting functions. An adjustable 12V system fan output and a 1.5kVAC isolated auxiliary stand by output of 5VSB/1A are available to power the application's housekeeping functions. Peak efficiency reaches up to 95% and in standby mode, the unit is compliant to ecodesign requirements. The product holds worldwide safety files to medical, industrial and ITE standards along with electromagnetic compatibility compliance with class A immunity and class B emissions. All these features make the product one of the easiest to integrate modular power solutions in the industry.

Selection Guide

Part Number	Input Voltage Range [VAC]	Output Voltage Factory Set [VDC]	Output Voltage Range [VDC]	Max. Output Current [A]	Efficiency typ. (1) [%]
RACM1200-24SAV/ENC	80-264	24	24-28	50A	95
RACM1200-48SAV/ENC	80-264	48	48-56	25A	95

Notes:

Note1: Efficiency is tested at nominal input and 40-60% load at +25°C ambient temperature

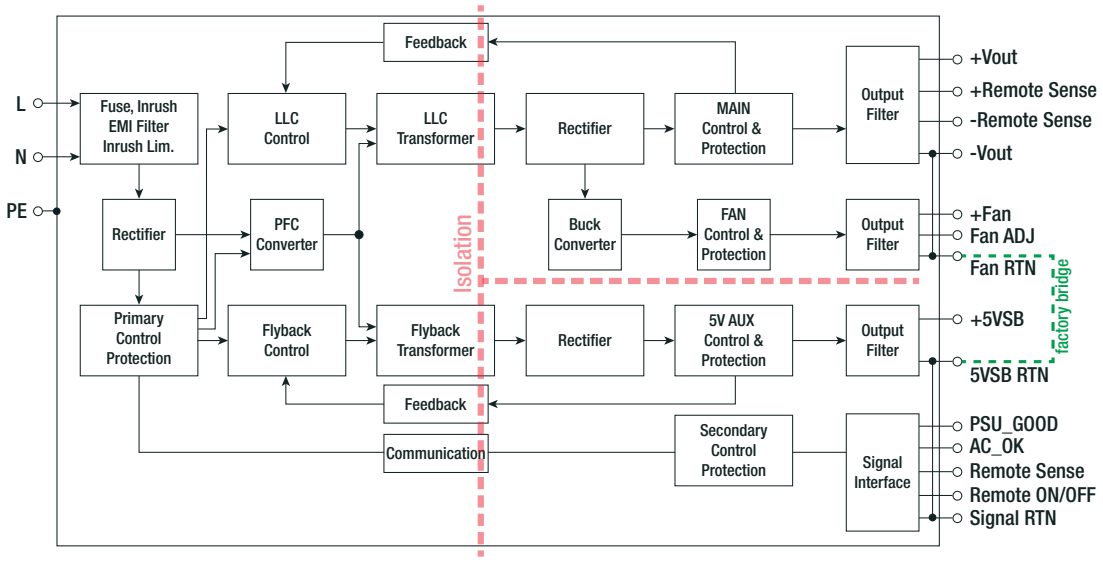
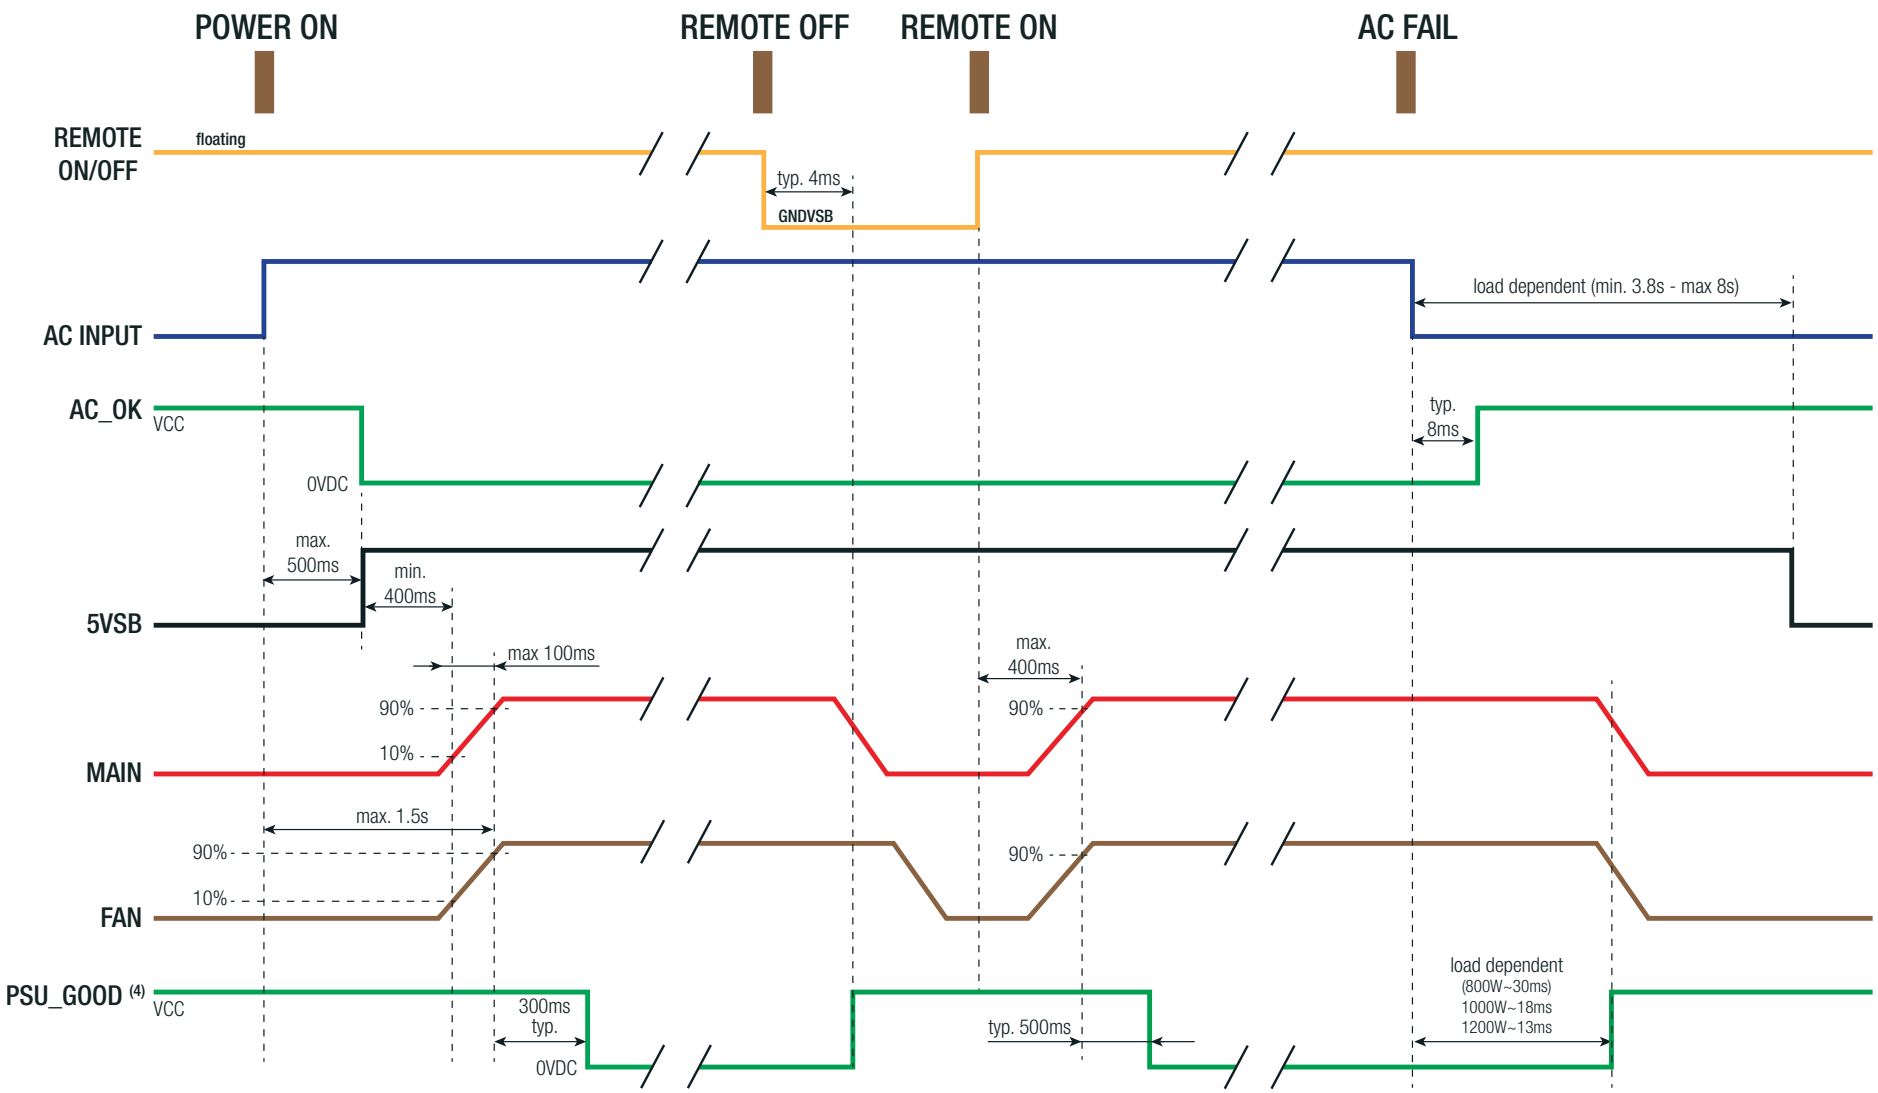
BLOCK DIAGRAM



Specifications (measured @ Ta= 25°C, nom. Vin, full load and after warm-up unless otherwise stated)

SIGNALS



Notes:

Note4: The outputs are open-drain and require an external pull-up resistor to keep the output in a defined logic state

Specifications (measured @ Ta= 25°C, nom. Vin, full load and after warm-up unless otherwise stated)

Signal Description

Remote ON/OFF

Pin position - #17 (CON3 connector). Pin type – input pin, referenced to 'SIGNAL RTN' ground. Maximum allowed voltage level: 5VDC. Leave this signal 'open' (not connected) for always-ON operation. Connect to 'SIGNAL RTN' for 'always-OFF' operation.
NOTE: Typically, use external mechanical switch between pins #17 and #18 of CON3 connector to control the unit's on/off functionality.

Remote Sense Activation

Pin position - #15 (CON3 connector). Pin type – input pin, referenced to 'SIGNAL RTN' ground. Maximum allowed voltage level: 5VDC. Leave this signal 'open' (not connected) for internal output sensing functionality. Connect to 'SIGNAL RTN' for activating the remote main-output voltage sensing. When this functionality is set active, the pins 'Remote Sense +' (pin #10) and 'Remote Sense RTN' (pin #9) must be connected to the load points where customer wants to remotely monitor the main output amplitude. When this functionality shall be left inactive (default state), the remote sensing lines 'Remote Sense+' and 'Remote Sense RTN' must stay unconnected.
NOTE: Typically, activating this feature comes together with an external wired sense line connections to the load point, which is expected to be done at process of installing the unit within a system.

AC_OK

Pin position - #13 (CON3 connector). Pin type – open-collector output pin, referenced to 'SIGNAL RTN' ground. Minimal pull-up resistor: 5kOhm. Maximal pull-up rail voltage: 5VDC. Maximal output current (+25°C): 1mAmp. Active status: low. Output voltage at active-low state (+25°C): max. 0.4V. Recommended usage: pull-up resistor of 10kOhm to +5VSB voltage rail. The 'AC_OK' signal is set active-low state, when input AC line is more than typ.80VACrms. The 'AC_OK' signal is set inactive-high state, when input AC line is less than typ.70VACrms.

PSU_GOOD

Pin position - #14 (CON3 connector). Pin type – open-collector output pin, referenced to 'SIGNAL RTN' ground. Minimal pull-up resistor: 5kOhm. Maximal pull-up rail voltage: 5VDC. Maximal output current (+25°C): 1mAmp. Active status: low. Output voltage at active-low state (+25°C): max. 0.4V. Recommended usage: use pull-up resistor of 10kOhm to +5VSB voltage. The 'PSU_OK' signal is set active-low state, when 3 conditions are met: outputs are present, temperature is within limits (less than warning temperature) and no internal failure is activated (e.g. OTP, OCP, OLP, etc.) The 'PSU_OK' signal is set inactive-high state, when at least one of the above 3 conditions is not met.

PROTECTIONS

Parameter	Type		Value
Internal Input Fuse	L and N (dual fusing)		2x T12A/250VAC
Over Voltage Category (OVC)	IEC62368-1; IEC61010-1 (10) IEC62477-1; up to 2000m		OVCII OVCIII
Over Temperature Protection (OTP)	detected on internal sensors		auto recovery after cooling down to 70°C (±5°C)
Over Temperature Warning			refer to ***"LED Signals"*** and ***"PSU_GOOD"*** description
Class of Equipment	with PE		Class I
Isolation Voltage (5)	1 minute	I/P to O/P (unit)	4kVAC
		I/P and O/P to chassis	1.5kVAC
		O/P to 5VSB & signals; 5VSB & signals to chassis (when factory bridge #7 to #16 is removed)	1.5kVAC
Insulation Grade	I/P to O/P		reinforced
Earth Leakage Current			NC: 300µA max.; SFC: 1mA
Patient Leakage			NC: 100µA max.; SFC: 500µA
Means of Protection			2MOPP
Medical Device Classification			built-in, suitable for Type BF rated medical applications

Notes:

Note5: For repeat Hi-Pot testing, reduce the time and/or the test voltage

Specifications (measured @ Ta= 25°C, nom. Vin, full load and after warm-up unless otherwise stated)

PROTECTIONS MAIN OUTPUT

Parameter	Type		Value
Short Circuit Protection (SCP)			auto recovery, hiccup mode
Over Voltage Protection (OVP) (6)	main output and fan output protection activated	24Vout 48Vout	29.5VDC typ. 59VDC typ.
Over Load Protection (OLP)	refer to ***"Over Load Protection"***		max. power / max. current limiting / hiccup mode

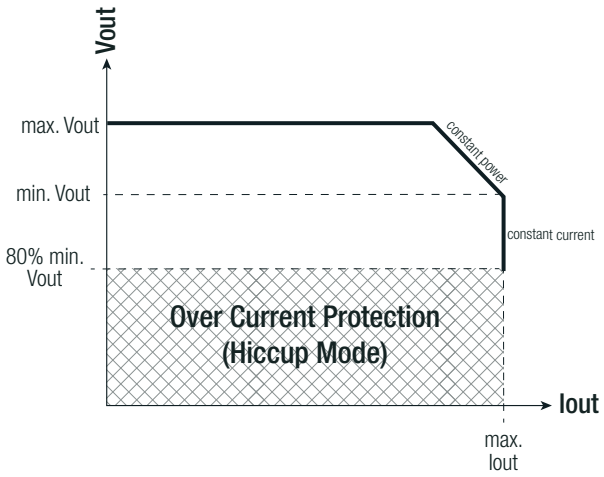
Notes:

Note6: Unit is not protected for reversal polarity on the output and can be damaged during this event

Over Load Protection

The unit operates in constant-voltage mode until the max. output power is reached. In case of overload, the unit then decreases the output voltage according the constant power curve until the current reaches the maximum output current. Permanent operation in overload may damage the unit. Refer to ***"Suggested Power Rating for main Output"***

For even higher load demands, the unit delivers the max. Iout current and further reduces the output voltage (constant-current curve). When the output is less than 80% of the minimal output voltage, the unit shuts-off and triggers protection mode of all outputs with an auto-restart attempt occurring typically every 4 seconds.



PROTECTIONS FAN

Parameter	Type	Value
Short Circuit Protection (SCP)		auto recovery
Over Voltage Protection (OVP)	main output and fan output protection activated	auto recovery, hiccup mode
Over Current Protection (OCP)		auto recovery, power limitation

PROTECTIONS 5VSB

Parameter	Type	Value
Short Circuit Protection (SCP)	all outputs protection will be activated	auto recovery, hiccup mode
Over Voltage Protection (OVP)		auto recovery, hiccup mode
Over Current Protection (OCP)		auto recovery, hiccup mode

ENVIRONMENTAL

Parameter	Condition		Value
Operating Temperature Range	refer to ***"Main Output Nominal Power Rating vs. Ambient Temperature"***	T_{AMB} and T_{BASE} temperature max. start-up temperature	-40°C to +80°C +70°C typ.
Operating Altitude (7)	IEC/EN62368-1 ANSI/AAMI/EN60601-1 (pending)		5000m 4000m
Operating Humidity	non-condensing		95% RH max.
IP Rating			IP20
Pollution Degree			PD2
Design Lifetime	+40°C (reference point)		88 x 10^3 hours

Notes:

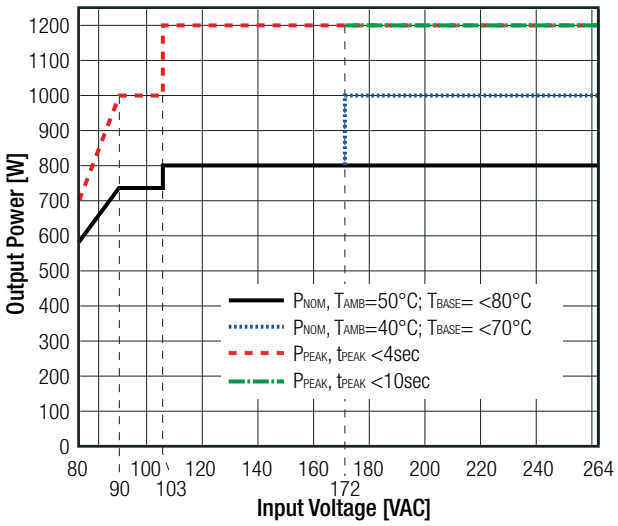
Note7: Recognized by safety agency for safe operation up to 5000m. High altitude operation above 2000m may impact the performance and lifetime. Please contact RECOM tech support for advice.

continued on next page

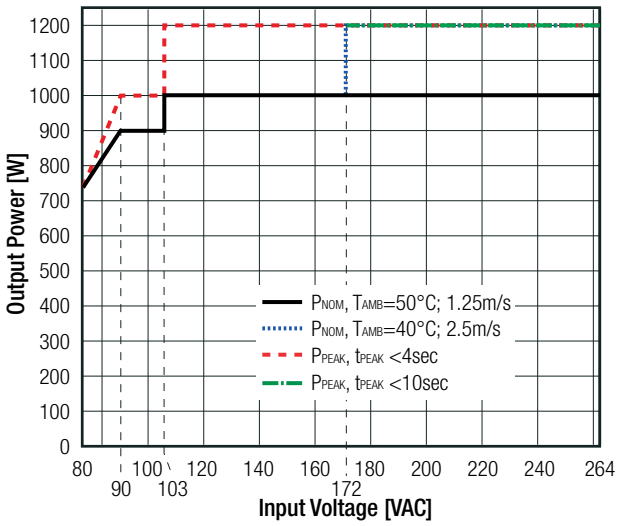
Specifications (measured @ Ta= 25°C, nom. Vin, full load and after warm-up unless otherwise stated)

Suggested Power Rating for main Output

Conduction cooled operation (still air / non stired)



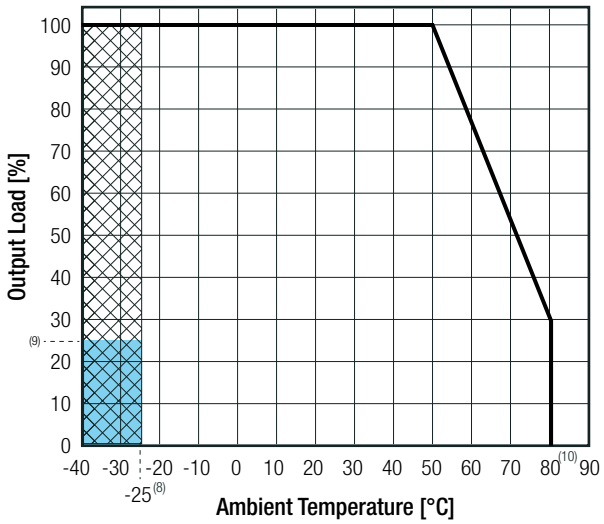
Provided airflow trough the unit



The units were evaluated to safety files for nominal input voltages 100-240VAC; including a tolerance band of ±10%, with a specified maximum T_{BASE} of 80°C for full load rating with 50°C T_{AMB} and up to 80°C T_{AMB}. at reduced output power. T_{BASE} at reference point (see **"thermal reference point"**) shall not exceed 70°C, 80°C or 90°C depending on the condition as per derating graph.

Peak power was evaluated at 60s duty cycle period for safety files. Without externally provided forced airflow, continuous output power needs to be limited to 1000W at high input voltage range and T_{AMB} <40°C with a T_{BASE} <70°C. With forced airflow of 2.5m/s 1200W continuous boost power at high input voltage range (>172V) is available.

Main Output Nominal Power Rating vs. Ambient Temperature



Notes:

Note8: Below T_{AMB} -25°C some specifications may not be met

Note9: Output Power at T_{AMB}= -40°C cold start ≤250W.

Note10: At T_{AMB} +80°C and 30% load, the maximum allowed baseplate temperature T_{BASE} ≤90°C measured on thermal reference point. Refer to ***"thermal reference point"***

Specifications (measured @ Ta= 25°C, nom. Vin, full load and after warm-up unless otherwise stated)

PEAK LOAD CAPABILITY

PEAK POWER IS NOT AVAILABLE DURING START UP PHASE!
Exceeding power ratings, may reduce the lifetime and lead to OLP power limitation or OTP temperature shut off. Inherently safe unit set up for more strict automatic power limitation is available on request per firmware setting option. Peak Power duty cycle plus recovery period shall not exceed 90% of the average nominal power for repetitive load conditions.

Peak Load Calculation

$$P_{nom} * 0.9 * (t_{rec} + t_{peak}) \geq P_{peak} * t_{peak} + P_{rec} * t_{rec};\ [t_{rec} + t_{peak} \geq 60s]$$

P_{nom}	... nominal power output (as per derating graph)	[W]
P_r	... applied recovery power	[W]
P_p	... applied peak power	[W]
t_r	... recovery time	[s]
t_p	... peak time	[s]
	V_{IN} <172VAC = 4s	[s]
	V_{IN} ≥172VAC-264VAC = 10s	[s]

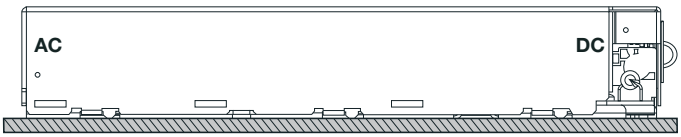
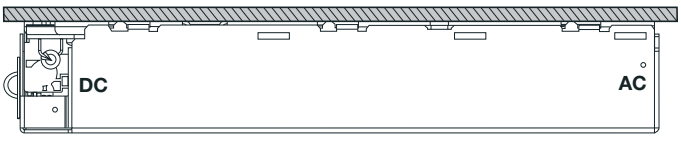
INSTALLATION AND APPLICATION

Mounting suggestions

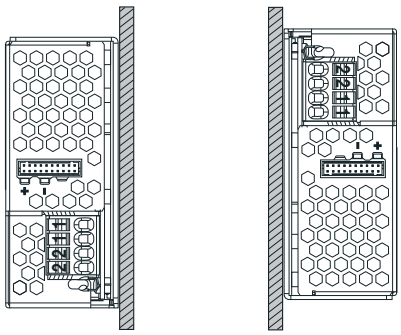
horizontal



upside down



side



If the PSU is horizontal, upside down or side mounted, no derating is required.

With forced air cooling, mounting orientation has no impact on output power. Device should be fan cooled from AC side.

If thermal conduction cooling is suggested, use of heat sink compound is recommended for improved heat transfer via baseplate.
