

Low resistance chip resistors (long-side terminal)

■ PRL / RL series

Features

- Innovative structure that takes consideration of heat dissipation suppresses the surface temperature enabling the small sizes, reduction of the influence on surrounding components, excellent temperature cycle resistance, low ESL and low noise.

Applications

- PC power sources, inverters, automotive electronics, adopters, industrial machines

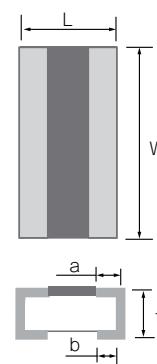

◆ Part numbering system

PRL	1220	-	R010	-	D	-	T5	Packaging quantity: T5(5,000pcs)	RL	3720W	T	-	R10	-	F	Resistance tolerance
Series code								Resistance tolerance	Series code							Nominal resistance value
Size: PRL0816, PRL1220, PRL1632, PRL3264																
Temperature coefficient of resistance																
Size: RL3720W, RL7520W																

◆ Electrical Specification

RL7520W	0830	2.00±0.20	7.50±0.30	0.40±0.20	0.40±0.20	0.50±0.20

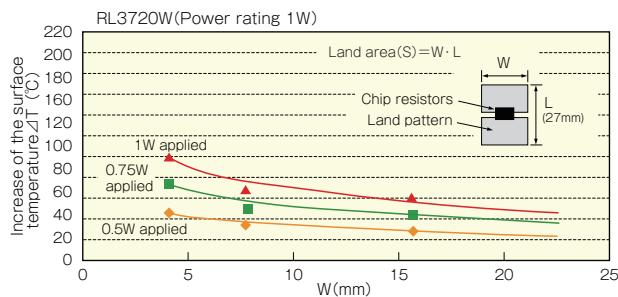

(unit : mm)

◆ESL (Equivalent series inductance)

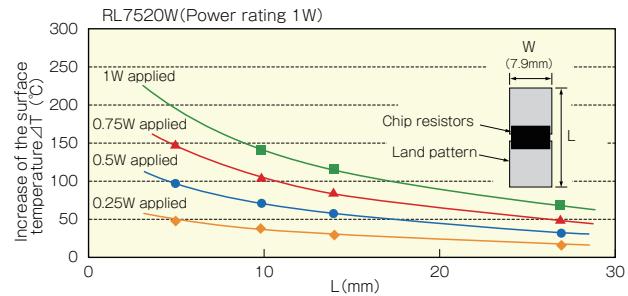

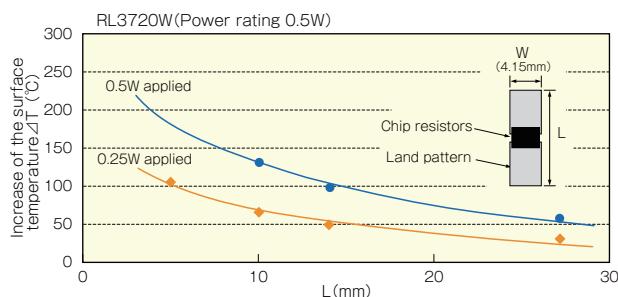

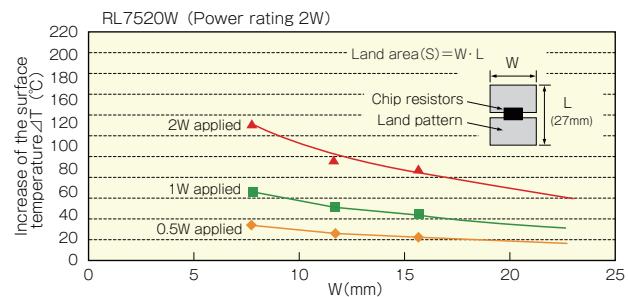

◆Surface temperature data

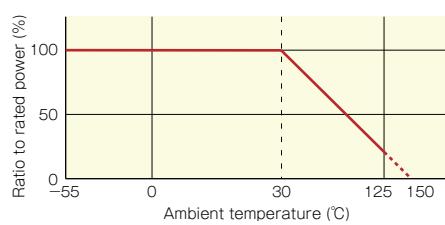

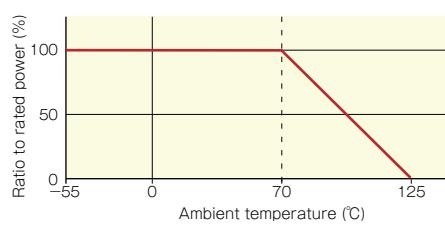

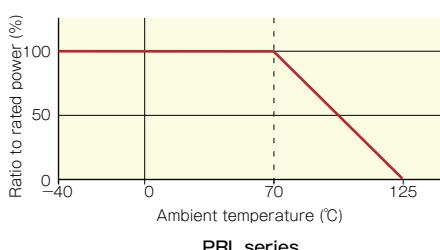

○ The high power type land pattern and surface temperature

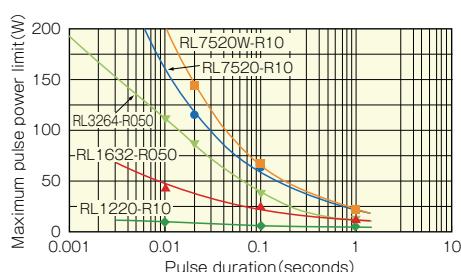

These high-power low resistance chip resistors are designed to dissipate heat efficiently through the land patterns on circuit boards. The actual temperature of the surface of the resistor is dependent upon the dimensions and the shape of the land patterns.

◆Derating Curve

◆Resistance to pulse power

Test procedure

Voltage pulse is applied to the test samples mounted on the test board.

After each pulse, resistance drift is measured. Pulse voltage is increased until the drift exceeds $\pm 0.5\%$.

The power at that voltage is defined as the maximum pulse power.
